Problem

The company tried to replace an out-of-date physical SAN and upgrade its IT infrastructure to Windows Server 2019.

Solution

Thanks to StarWind, the company creates a highly available Hyper-V environment and gets rid of an end-of-life SAN.

Problem

Prior to using **StarWind Virtual SAN (VSAN)**, MBR was running Dell EqualLogic SAN and VMware vSphere Hypervisor. The existing SAN was out-of-date and didn't allow the company to upgrade its IT infrastructure to Windows Server 2019. In order to do a technology refresh and unleash all the IT infrastructure potential, MBR was looking for a shared storage solution reasonably priced. Word of mouth and friends' recommendations led the company to StarWind.

Solution

MBR's choice fell on **StarWind VSAN** as it was the only solution on the virtualization market affording ground for upgrading the company's IT infrastructure to Windows Server 2019 and replacing the end-of-life SAN at no extra cost. StarWind provided the option to upgrade some of the network adapters to 10GB instead of using bonded 1GB connectors and create a highly available Hyper-V environment. MBR was also very pleased with the help of the StarWind support team. StarWind VSAN has become a perfect match for the company's IT infrastructure allowing to save over \$10k.

StarWind was the most economical solution versus buying a new SAN appliance. With StarWind, everything runs beautifully.
