Problem

Sibergen Technologies were running an aging non-virtualized IT environment that could no longer keep up with company's needs.

Solution

StarWind HyperConverged Appliance delivered the required stability and performance without making Sibergen IT environment too complicated.

Problem

Before StarWind HyperConverged Appliance deployment, Sibergen IT environment was a mix of aging hardware without any real virtualization. Managing such environment was pretty difficult. What is more, the hardware could not bear the further workload growth and was no longer under warranty.

In order to simplify IT environment management and make the entire thing more reliable, Sibergen was looking for a virtualization platform.

Solution

Sibergen has chosen **StarWind HyperConverged Appliance** among other competitive solutions for its simplicity, stability, and performance.

The solution is supplied preconfigured. Any admin can easily align **StarWind HyperConverged Appliance** for specific needs and start production on it. Additionally, there's an experienced support team who always keeps an eye on the IT infrastructure health.

By mirroring data between nodes, the solution delivers true high availability. **StarWind HyperConverged Appliance** architecture and StarWind Virtual SAN provided Sibergen Technologies IT environment the required performance. The company also finds handy auto-tiering, a feature for streamlining "hot" storage space utilization. Thanks to this feature, high-performance storage never gets dumped with infrequently-accessed data.

StarWind HyperConverged Appliance delivered a solid hyperconverged platform and met all requirements including IOPS.
